

RELEASE NEWS

InfoRecall 15 Build 3

Favorite Documents

Did not delete an item correctly.

Synchronize Data Files

A couple of problems were encountered and fixed.

Extract E-mails

Added E-Mail Extractor. It will find and extract e-mails from single or multiple files.

Files can be InfoRecall .dat files as well as any other text based file like: txt, rtf, doc, html, csv and other text files.

Multimedia Search

Put back in use with some refinements.

Dialogs

General refinement and adjustments of dialogs.

InfoRecall 15 Build 2

Tray Icon (Taskbar) Exit

Very Important! When exiting from the System Tray Icon (Taskbar) Menu, InfoRecall did not save newly typed or modified text in documents.

Send E-Mail (as attachment)

Did not show correctly or not at all.

Most Recent Documents

When Maximize Edit Window from the View menu is used the Most Recent Documents in the File menu were move to the System menu rather than the File menu

Same with Multiple Documents.

Tools Menu

On Maximize Edit Window, Quick Launch Program menu did not properly reflect users choice.

View Last Used Document On Startup

Was not working properly.

64 bit Operating System Installation

InfoRecall is a 32 bit program. It was fully tested under 64 bit Windows 7.

Second Instance of InfoRecall

While InfoReall is minimized to the System Tray (Taskbar) and you start a second instance of InfoRecall, it will ask you if you want a second InfoRecall running because on exit of the second one it will again minimize to the System Tray (Taskbar) and you'll have two Icons there. You may not want that. If not set to exit to System Tray (Taskbar), a second InfoRecall will start.

Start InfoRecall with

The Start InfoRecall List displayed the same starting documents twice.

Save changes to Document

With Automatic Document Save off, changes to Document Name was not saved.

Cancel on Message asking to save changes did not work.

Hit List

Increased the number of characters that the hits are shown in context of from 80 to 100 for Search and Narrow Search. Changed printing of Hit list to reflect the 100 characters, changed printed form.

Read-Only

Strengthened Read-Only security by disabling menus and Toolbars that should not be available in read-only mode.

View Menu

Did not properly show Draft View or Page View

Added new Table Menu

The Table menu was previously in the Insert menu. It is more prominent now on its own.

View Toolbars

In the View menu Hide/Show Toolbars did not show correctly.

Log-on Password

Was not activated

Folder Password & Read-Only Password

Labels changed for clarity

Search Document Tree

Added Icon to Search Document Tree

Insert Object

Insert menu displayed Draft View instead of Insert Object

InfoRecall 15 Build 1

Windows 7

InfoRecall version 15 is fully Windows 7 compatible

Hit List

Added Save the search results showing in the Hit List to a text file

Common Dialogs

Changed Browse for Folders Dialog: Added the ability to Create New Folder and to resize dialog

Changed Open/Save File Dialogs: Changes reflect newer style

Templates

Removed annoying "Lose Data?" messages on Templates

Hyperlinks

Hyperlink to Document in same folder did not work

PopUp Editor on Cancel displayed improper message

Hyperlink to another folder on Cancel and OK created Hyperlink (to nothing). Now cancel the dialog

Recently Used Documents

The wrong message was displayed if document was not found in Recently Used Documents from the File menu

E-mail Attachments

E-mail attachments files are temporarily saved as RTF files and then deleted upon closing InfoRecall. However all other RTF files were deleted on closing too

Minimize to Tray

Changed Exit to System Tray in Preferences to Always Minimize to Tray
Added Minimize to Tray to the File menu. This is different from Always Minimize to Tray in that it is not a permanent setting

Favorite Documents

When adding Favorite Document they are now highlighted in the Favorite Documents dialog so you can see what has been added

Manual Document Save

With Automatic Document Save off, manual saves did not work correctly

Reminders

Added Print to the Reminder Note dialog. This prints the complete dialog, note and calendar

Recycle Folder

Added the number of documents in the Empty Recycle Folder message dialog

InfoRecall 2009 Build 2009.4 Portable

Now you can carry your InfoRecall on your USB Flash Drive along with all of your data and settings with you. Use them on any Windows computer. All without leaving any data behind.

InfoRecall 2009 Build 2009.4

Folder and Font Box dropdowns

Now dimensioned more accurately to fully open for all the different Screen Resolutions.
Folder and Font Dropdown box length Spin adjustments added in Customize View Preferences

Tree Fonts

Tree Font did not allow fonts smaller than 8 in Editor & Tree Font Preferences

InfoRecall 2009 Build 2009.3

Folder Manager

Added a Status Bar to Folder Manager showing Total Number of Folders, Total Number of Documents and Total size of all Folders. We also comma delimited the numbers to make them easier to read. Corrected the Totals count.

Document Manager

Corrected Total Folder count.

InfoRecall 2009 Build 2009.2

Next Hit

F3 (Next Hit) did not work when after searching InfoRecall folders.

Previous Hit

F4 (Previous Hit) did not work when after searching InfoRecall folders.

Folder Manager

Formatted the Folder Sizes with comma delimited numbers (1,256,897) for easier read.

Document Manager

Document Manager's dialog did not size correctly for the different screen resolutions.

Backup Utility

Changed the sequence of operation to make Backup and Restore easier.

InfoRecall 2009 Build 2009.1

Multiple Document View

When searching InfoRecall Folders in Multiple Documents View with multiple documents open and, changes made to some documents and, a Search Hit results in opening another InfoRecall Folder, the changes made to documents were not saved.

Backup

Modified so that Reminder text is backed up as well.

On restore, reminder txt knows where to restore to if different than data source folder.

Compact

When Compacting Folders InfoRecall would check for Folder Passwords. This was not necessary as no Folders were opened to reveal their contents and therefore was just slowed the Compact function.

Dialogs

Made some dialog boxes larger to keep in step with larger Monitors and greater resolutions.

Multimedia Search

Added Delete so that files found can be deleted directly from Multimedia Search.

Reminders

Changed Reminder Note dialog to show a calendar set to the Reminder Date to give you a better feel of the Reminder date in context of the week it is schedule in.

Hyperlinks

New dialog with buttons to make choosing hyperlinks easier.

Help

New help with more pictures to better explain features and functions.

InfoRecall 2008 Build 2008.2

Logon Password

Logon Password did not work properly in Windows Vista.

InfoRecall 2008 Build 2008.1

Windows Vista

InfoRecall 2008 is now fully Vista compatible.

Favorite Documents & Start with InfoRecall

Registry Cleaners consider all registry entries that don't refer to a valid path for an EXE or DLL file invalid and deletes them "Favorite Documents" and "Start with InfoRecall" did not write what Registry Cleaners consider a valid path and therefore all references to them were deleted. Very annoying! Changed so it won't happen.

Compact Folders

Now compatible with Vista.

Reminders

If you are on an existing Reminder and choose a new date from the calendar or the Daily option, InfoRecall now asks if you want to change the date, change the date to daily or change daily to date and offer you a choice of Yes, New, Cancel. Yes will make the change and New will move the highlight down to the next available row.

Start with InfoRecall

The Start InfoRecall with" dialog did not properly show the start documents when files were not

open. That made it impossible to manage starting documents.

Also

When there were only two starting documents the "Multiple Document View" was not turned on. It only turned on when there were more than two documents.

Copy/Paste

Copy/Paste from Office 2007 to InfoRecall is now working properly.

Maximize Edit Windows

Did not work correctly when InfoRecall opened a document with the Start InfoRecall with command. The Edit Window did not maximize although it did maximize when other documents were opened.

Folder Password

The Enter key did not work on the Ok button. After typing the password the user had to click on the Ok Button.

Hyperlink to E-mail

Changed to make it work correctly with all versions of Windows and Outlook

Send document as an e-mail attachment

Changed to make it work correctly with all versions of Windows and Outlook

InfoRecall 2007 Build 2007.4

Windows Vista compatible with minor changes changes and bug fixes.

InfoRecall 2007 XP Build 2007.3

A new version - some new things, some changes, always fixes that come to our attention.

New, more descriptive Help.

Speed fix for opening large folders on startup.

Fixed network Restricted Access problems.

Fixed some menu problems

InfoRecall XP 2007 Build 2007.1

Swap Source Folders

Changed to accommodate:

Custom Only: Password Protected. Users can not add Source Folder locations by browsing from them in the Swap Source Folder Dialog. Source folder location must be added manually.

Disable Swap Source Folders: Password Protected. Lets you add Source Folder locations for a user then disable the dialog so that it can't be seen. Users will not be able to Swap Source Folders,

Reminders

Redesigned to function as:

Document based Reminders: This type of reminder allows you to schedule documents that you want to view or work with on certain dates.

Note based Reminders: This type of reminder allows you to schedule a date and write a note to appear on that date to remind you of things to do or an appointment or whatever you need to be reminded of on a certain date.

Dialog Windows

Dialogs have been seized to fit your Screen Resolution

Format Plain Text

Format Plain Text without a document name would delete all document text.

Maximize Editor Window

Maximize Editor Window would revert back to regular editor with Title bar after certain operations.

List Boxes

Headers and lines have been added to dialogs with lists to make them easier to read.

New with Clipboard Text

Corrected interference with certain other programs.

Printing

After printing a page the first letter of the page was always highlighted.

InfoRecall XP 2006 Build 2006.2

Check for Updates

The ability to check for updates was added under the Help menu.

InfoRecall XP 2006 Build 2006.1

Start InfoRecall on Windows Startup

Start InfoRecall with windows startup.

File Center

Renamed Folder Manager.

Document Center

Renamed Document Manager.

File Manager

Added File Create and Accessed date.

Document Manager

Background color and Fonts at times were black so they couldn't be seen. Added dialog size for different resolution.

Fonts & Background colors

Added Custom Colors.

Encrypt/Decrypt

Deleted. Did not always work correctly.

Footer/Header

Deleted.

Save, Save All, Save As

Moved from Documents menu to File menu.

Quick Type

When Quick Type menu check mark was depressed, the space bar didn't move spaces. Now automatically detects if there is Quick Type text. Default activator is the Space bar.

Quick Type Check Mark

Deleted. No longer needed since it is now automatic

Protect

Deleted. Same as Hide Text.

Hide Text

Moved from Fonts menu to Edit menu.

Reveal Text

Moved from View menu to Edit menu.

Switch Focus

Crashed without an open document window.

New Document

When moving to another document without naming the new document it would display a "No Name" message repeatedly.

Quick Launch Program

Did not show Quick Launch Name on Menu on.

Start InfoRecall with

When a Document that was in the "Start InfoRecall with" List was deleted, a message would always be displayed on starting InfoRecall without reminding user to delete it from the List.

View Hyperlink Cursor

Deleted. It is now set as default.

Last 4 Documents in File Menu

The position of the "Last Documents Opened" was wrong. The starting position was 2 spaces too high therefore hiding the "Menu Separator" and the "Export Delimited ASCII file" menu item.

InfoRecall File

Renamed InfoRecall's Files "Folders" bringing the terminology in line with Windows standards. Folders hold Documents.

Backup Utility

On Restoring InfoRecall Folders in a source folder where InfoRecall Data Folders exist, Backup now gives you a choice to replace existing folders or not with: Yes, Yes to All, No All or Cancel. Fixed other problems.

Copy/Move Documents

Copy or Move to different Data Folder was not possible if a document of the same name existed in the Data Folder. Now the option to overwrite it has been added.

Rename Folder

Renaming a Data Folder in a Source Folder then renaming a Data Folder of the same name in another Source Folder was not possible.

InfoRecall XP 2005

System Tray

Exit InfoRecall to the System Tray. This is the default mode but preference settings can change this.

New with Clipboard Text

Creates a new document from text that is in the Clipboard and automatically saves it. This can be done while InfoRecall is in the System Tray.

Maximize Edit Window

Maximizes the Editor window by eliminating the Title bar and remembers it next time you start InfoRecall.

No Toolbars

Utilize the full workspace, work without Toolbars (create, rename, open files). Not possible in previous versions.

Fixes

We fixed and changed whatever came to our attention and changed quite a few other things to make InfoRecall easier to work with.

InfoRecall XP 2004

System Tray

Exit InfoRecall to the System Tray. This is the default mode but preference settings can change this.

New with Clipboard Text

Creates a new document from text that is in the Clipboard and automatically saves it. This can be done while InfoRecall is in the System Tray.

Maximize Edit Window

Maximizes the Editor window by eliminating the Title bar and remembers it next time you start InfoRecall.

No Toolbars

Utilize the full workspace, work without Toolbars (create, rename, open files). Not possible in previous versions.

Fixes

We fixed and changed whatever came to our attention and changed quite a few other things to make InfoRecall easier to work with.

InfoRecall XP

Time Tracker

For Lawyers, Consultants, Accountants or other professionals who need to keep track of client time and client charges. The Time Tracker dialog floats on top of InfoRecall, which means that you can open an InfoRecall document; call up Time Tracker, move it aside and track client time while at the same time making notes in the open document. You can Paste the Date, Start and Finish time, Total Time, Cost per Hour and total Cost to a document.

Synchronize Data Files

Synchronizing files is a very useful if you work on the same files on more than one computer. Work on your PC at the office then take your files with you to work on your laptop. Back at the office, synchronize your files. Not only InfoRecall data files can be synchronized! We made it so that all types of files can be synchronized.

Save As

Now you can Save an InfoRecall Document as a Web Page. The document can contain text, tables as well as graphics. Documents can also be saved as RTF (Rich Text Format) and Text files

IntelliMouse Support

Scroll an InfoRecall document by using the Microsoft IntelliMouse pointing device. If you've installed Microsoft IntelliMouse or Microsoft IntelliMouse TrackBall, you can use its built-in scrolling capabilities; there's no need to click scroll bars or buttons on the screen.

Auto Spell Checking

Automatically check spelling as you type. To check for spelling errors "behind the scenes", use Auto Spelling. As you type, the spelling checker checks the text, and then marks possible errors with wavy underlines. To correct an error, right click the mouse to display a list of suggested words and select the correction you want.

Copy/Move Data Files

InfoRecall is increasingly used on more than one computer. The ability to copy and/or move data files around along with system is very important. Copy or Move Data Files from one computer to another whether it is your Laptop or computers on your local network.

Network

Many changes were made to make networking InfoRecall saver and more stable.

Help Feature

The context sensitive Help System has a new interface, easier step by step instructions and the ability to print all the help topics. Press F1 on any dialog box and get quick and precise help.

Launch Password

Don't let just anybody launch InfoRecall. Password protect the launching of InfoRecall and keep unauthorized persons out.

Customize Tree Icons

Change or reset the Tree Icons of single or multiple documents or change the Tree Icons for all the documents at once.

Splash Screen

The first screen that comes up when you start InfoRecall that contains the logo and credits and the copyright notice. Now you can turn it off! Start InfoRecall faster without that first screen.

.Bookmarks

A bookmark is a word or a location in a document that you identify and name for future reference. You can use bookmarks to quickly jump to a specific location in a document.

Calendar Date Stamp Document Name

Date stamp the Document Name Field as well as the Document Editor! Simply place the cursor where you want the insertion, select a date and click on the Insert button.

Document Tree

The Up & Down keys on the keyboard can be used to move up and down through the documents in the Document Tree Window. This is very useful when you want to quickly look through several documents without having to click back and forth.

Encrypt Files Files

Protect your valuable information from access by others. Encrypt your data files! This release offers you a choice: Encrypt your data files or protect them with a password only.

Insert the Date/Time in the Document Name

Insert the Date/Time either in the Document Name Field as well as the Document Editor! Locate the cursor where you want the date to be inserted, either in the Document Name Field or the Editor and InfoRecall will insert the Date/Time just where your cursor is.

Open the last used Document on Startup.

Opens the last worked on document every time InfoRecall is started. Add extra an extra dimension of convenience! Start off where you left off without having to open the file and click on your document.

Print Unsaved Documents

You used to have to save a document to print it, which was an inconvenience if you just wanted a quick note. We have changed that so that you can print documents without having to save them first. (Scratch pad)

Quick Change Document Font

Changes the font and font size to the default font and size. For instance, if your current document fonts and size are mixed or the font is not your default font and default size as set in General Preferences then using this feature changes the current document fonts to your default font and your font size to the default font size. No changes are made to any other formatting such as Bold, Italic, Underline, Font Color, etc.

Sort Text

Quickly arrange selected text alphabetically. InfoRecall sorts text alphabetically based on the furthest left character in the selection. Sort text in ascending or descending order

Quick Launch a Program

Launch the software of your choice directly from inside InfoRecall. Set this Menu Item to run any software program and have its name appear in InfoRecall's menu.

Quick Launch Calculator

Run a Calculator from within InfoRecall. The default Calculator is Windows' Calc, but InfoRecall can be instructed to run any other Calculator of your choice.

Read-Only Data Files

Have you ever transferred a file from a CD to your PC and found that you could not open the file? Like other programs, InfoRecall can not open a data file whose attributes are Read-Only! With this new release, InfoRecall automatically changes these attributes to Archive! No more fear that your files were corrupted or destroyed! InfoRecall changes the attributes from Read-Only to Archive, lets you know about it and opens the file.

Insert Table Column

Insert or append a table column at e cursor position.

Table Cell Border Color

Set the border colors for the table cells. Every border can be of a different color.

Multimedia Search

We added a Print button to the Hit List so that you can print the results of your Multimedia Search and we also added View Hit button for those of you who hate to double click. We also added the ability to scroll hit list with the UP/Down arrow keys to select a hit and allow you to view selected hit by pressing the Enter key.

Fixes

We fixed whatever came to our attention and particularly worked on the network part of InfoRecall to allow you to share information in a stable environment.

InfoRecall 2000

Favorite Documents

A quick way to open you most often used documents without going through the extra motion of opening a file and then clicking on a document to open it. Once a document is added to Favorite Documents you can use this feature to do your bidding. Add the button to your toolbar to make it extra fast. You'll find this feature in the Documents menu.

Expand Document Tree when opening a File

You can now turn this feature on/off. When on, the Document Tree is expanded to show all the branches every time a file is opened. Set it in the General Preferences dialog box from the Tools menu.

Compact Files On Closing

InfoRecall writes blocks of text to its database that are of a certain size. If the document you save has less text than the block size some spaces will be saved too. Also, the database does not adjust automatically as text, formatting or pictures are removed from a document or if documents are deleted. You can manually compact files using "Compact Files" from the Tools menu. Now you have the option to do it automatically every time a file is closed. Compact Files on Closing compacts a file immediately when it is closed to make your files as small as possible.

Reminders

Network user of InfoRecall could not use Reminders individually because it was written to the folder where the users data path was pointing to. So everybody had everybody else's reminders. Reminders are now written to the folder where the users InfoRecall.exe resides. Everybody can now use Reminders without sharing them. User who are upgrading to InfoRecall 2000, Build 2000,3 must move Remind.txt from their data folder to the InfoRecall application folder.

Multiple Document View

The document size in Multiple Document View would not display correctly in the Statusbar. When multiple documents were open it would display the size of the last one opened but when clicking on the document tabs to view other documents the size would not change. This is correct now.

Multimedia Search

The dialog box was changed to make it more efficient and informative.

New Editor

Previous editor had difficulty copying text from Microsoft Word or web pages with certain formatting. The new editor manages the various formats without problems.

Reposition text by Dragging

You can now drag a word, a sentence or a paragraph to a different position in the document. Simply select the text you want to move by highlighting it and drag it to a new position in the paragraph or document.

Change Tree Icons

Customize your document tree! Change the icons of your nodes and branches. Choose from an array of icons or make your own. You can now make your document tree look really distinct or more visually informative of it's content. Light up your document tree - customize the tree icons.

Background Colors

Change the background colors for both the editor and the document tree.

Quick Change Text Color

If you decide to change the background color of the editor to a color that makes the text either hard to read or completely unreadable then this feature enables you to quickly change the basic text colors. The color change will only affect the color you choose in Change Color "From". All other colors in a document remain unchanged. This of course is logical as changing other colors would destroy your carefully formatted document.

Hyperlinks

Hyperlinks are now written as hidden text to the document where the hyperlinks are made. This enables the hyperlinks to survive copying and moving documents to another file. Hyperlinks established with previous version of InfoRecall are not compatible. They can not be read with the new version.

Strip Paragraph Marks

When pasting text copied from various sources into InfoRecall, the resulting paragraph formatting is often wrong. Paragraph marks, where there shouldn't be any, break up the flow of sentences and make the text look all out of place. Words are often separated by double spaces too. You can strip paragraph marks and double spaces to make your sentences and paragraphs whole again

Character Spacing

Changes the spacing between characters. Expand or Condense single or multiple words to suit your need.

Paragraph Color

This option allows you to color a paragraph.

Bullets & Numbering

New and improved! Now has a choice of 7 bullets and 5 numbering units.

Table Cell Color

Color your Table cells for a better presentation.

Files & Fonts drop down box lengths

If you have a lot of files you may want change the length of the drop down box so that you can see more files and selection becomes easier. Same with the Fonts drop down box.

Quick Type

Quick Type greatly facilitates text entry by keyboard.

Tired of repeating words, terms, phrases, whole sentences? Let Quick Type do it for you. Quick Type makes it easy. InfoRecall maintains a list of abbreviations (e.g. ph) and a list of Quick Type definitions (e.g. Phantech Software). Then if you type ph InfoRecall types Phantech Software on the fly. Just type an abbreviation, press the Space Bar and Quick Type does the rest.! Quick Type definitions can be single words, phrases, sentences or multiple lines of text.

Strip Double Spaces Only

When pasting text into InfoRecall that is copied from various Internet sources the resulting sentences often have words that are separated by a double space (' '). You can strip the unwanted space thereby reducing double spaces to single spaces between words

Reset Default Workspace

Resets your tool bars and workspace windows to the state they were in right after installation. This might be necessary if for any reason a tool bar or one of the workspace windows fails to display.
